Study-owned configuration
IDS repositories
Repository criteria, taxonomy and prompts
IDS datasets
Dataset criteria, taxonomy and prompts
Conformal treatment effects
Eligibility, quality and assumption extraction
Shared paper config schema
Same operational keys; study-specific values
Search profiles + pipeline values + screening + taxonomy + prompts | Shared runtime and model profiles
(i) Provider discovery
(ii) Evidence + prefilter
(iii) Scientific screening
(iv) Consensus + reconciliation
(v) Outputs + evaluation
Reference profiles · evaluation only
Repository API
Repository search
Date sharding, deduplication, README + docs
Repository prefilter
Deterministic evidence scores
Repository role validation
IDS repositories
Consensus + ensemble
Structured prompts
Repeated assessments per model
Evaluation + reporting
Recovery + extraction metrics
Review: per-provider and union
OpenAlex
Both paper studies
Shared paper collector
Direct paper search
Diverse survey seeds (optional)
Backward snowballing (optional)
Union, dedupe + configurable ranking
Shared paper evidence
DOI / title lookup + bounded PDF
Deterministic prefilter
Candidate / borderline gate
Dataset release validation
